

FAIZAN PARVEZ

📞 7004663713 ✉ faizanparvez30@gmail.com 🔗 [Linked In](#) 📍 Greater Noida

SKILLS

Programming Languages: Python, Java, Bash/Shell Scripting, YAML, HCL

Frameworks & Libraries: Flask, boto3 (AWS SDK), Kubernetes Manifests, Helm, Prometheus, Grafana, ArgoCD

Tools & Platforms: AWS, Docker, Kubernetes, Git, GitHub, Jenkins, GitLab CI/CD, Azure DevOps, Jira, Linux (Ubuntu), VS Code, Terraform, Minikube, Github Actions

Databases: MySQL, Amazon DynamoDB

Core Concepts: CI/CD, Cloud Architecture, Containerization, Container Orchestration, DevOps, Infrastructure as Code (IaC), Computer Networks, Site Reliability Engineering, Distributed Systems, Incident Response, Agile Methodologies, Application Resiliency, Automation Scripting, OOP, DSA, GitOps, Observability, Automated Testing, Security

WORK EXPERIENCES

Project Administrator | Trainee
Nothing Technology Limited

Mar 2024 - Dec 2024
Hybrid • Gurugram

- Collaborated with cross-functional agile teams to design and improve integration and release quality processes across the full Software Development Life Cycle, contributing to secure and stable product delivery.
- Designed and maintained **testing dashboards and reporting systems**, achieving **100% on-time delivery** across all project milestones.
- Coordinated cross-functional testing pipelines across 20+ beta users for smartphone and IoT product releases, identifying and triaging 100+ critical bugs through structured feedback workflows.

PROJECTS

DeployWatch |  Github
Developer

May 2026 - Present

- Built an automated GitOps deployment pipeline using ArgoCD and Helm on Kubernetes, enabling zero-touch deployments with automatic rollback and application resiliency across integrated CI/CD toolchains, building self-healing infrastructure with automatic failure recovery.
- Designed and implemented CI/CD pipelines using GitHub Actions for automated testing, containerized image builds, and versioned deployments — applying pipeline principles consistent with Jenkins and GitLab CI/CD workflows.
- Engineered observability stack using kube-prometheus-stack, Prometheus, and Grafana — enabling deep insights into system performance, real-time metrics collection, and distributed infrastructure monitoring
- Containerized Flask application using production-grade multi-stage Dockerfile, configured HorizontalPodAutoscaler for auto-scaling and implemented liveness and readiness probes — ensuring application resiliency, operational stability, and zero-downtime deployments.

Technologies / Tools Used : Docker, Kubernetes, GitHub Actions, Helm, Flask, Prometheus, Grafana, ArgoCD, Python

CloudForge — AWS Infrastructure Automation |  Github
Developer

Apr 2026 - May 2026

- Architected and deployed production-grade AWS cloud infrastructure using Terraform across 4 custom modules — networking, compute, storage, and monitoring — following security best practices including encryption, access control compliance, and secure, scalable system design
- Implemented S3 remote state backend with DynamoDB state locking, eliminating local state risks and enabling safe concurrent deployments.
- Provisioned custom VPC with public subnets across multiple availability zones, EC2 with IAM role-based access, encrypted EBS, and S3 buckets with AES-256 encryption and public access blocking
- Configured CloudWatch metric alarms and SNS email alerting for CPU and instance health monitoring with a live CloudWatch dashboard

Technologies / Tools Used : Terraform, HCL, Bash, Docker, AWS, Flask

Cloud Resource Allocation Simulator

May 2025 - Nov 2025

Associated with IEEE Research Publication

- Built a Python data engineering tool to model, process, and visualize real-time load-aware resource allocation across cloud server clusters — gathering and analyzing large datasets to drive algorithmic decision-making.
- Implemented and benchmarked 3 scheduling algorithms (Threshold-Based, Weighted Round Robin, Round Robin), drawing data-driven conclusions that demonstrated 15-30% improvement in server load optimization.
- Generated visual load distribution analytics using **Tkinter**, enabling researchers to compare algorithm performance across varying traffic patterns

Technologies / Tools Used : Python, Tkinter

CERTIFICATIONS

AWS Certified Cloud Practitioner
Amazon Web Services

Feb 2026 - Feb 2029

Certification Url : https://www.credly.com/badges/dcd999c2-ef93-4405-88f2-8c0108ddb70d/public_url

AWS Academy Graduate - Cloud Architecting
Amazon Web Services Training and Certification

Certification Url : https://www.credly.com/badges/630ed6cf-18c4-40dc-96a4-c0848406f34e/public_url

AWS Academy Graduate - Microservices and CI/CD Pipeline Builder
Amazon Web Services Training and Certification

Certification Url : https://www.credly.com/badges/a558f4fc-4857-49ab-a140-5329b259ea10/public_url

PUBLICATIONS

Real-Time Load-Aware Resource Allocation in Cloud Systems

IEEE Xplore | Accepted, February 2026 (In Press)

- Co-authored peer-reviewed research analyzing dynamic load balancing efficiency in cloud environments to reduce response delays and optimize server utilization

EDUCATIONS

Galgotias University | Greater Noida
B.Tech in Computer Science

Sep 2021 - Jun 2025
CGPA : 8.68

ADDITIONAL

Open Source

Contributed to multiple repositories during Hacktoberfest 2022 (code reviews, documentation, bug fixes)

Problem Solving

Solved 100+ problems on LeetCode (Arrays, Trees, Dynamic Programming) — demonstrating strong debugging, problem decomposition, and code quality skills.
